## E0-Tubes and Pipes for fittings and flanges

Industrial and Mobile Applications  
Marine and Offshore Applications

ENGINEERING YOUR SUCCESS.

### **For your safety!**

Under certain circumstances, tubes, fittings and flanges can be subjected to extreme loadings such as vibration and uncontrolled pressure peaks.

Only by using genuine Parker components and following Parker assembly instructions you can be assured of the reliability and safety of the products and their conformity to the applicable standards.

Failure to follow this rule can adversely affect the functional safety and reliability of products, cause personal injury, property damage, and result in loss of your guarantee rights.

# Tubes for fluid, hydraulic and pneumatic Applications

## The world of tubes

### Your choice for high pressure.

The tube programme from Parker Hannifin gives all possibilities for usage in hydraulic applications. Tubes for fitting- and flange-systems, tubes for mobile and stationary systems. Different dimensions, carbon- and stainless-steel tubes as well as different surfaces are available.

### Approved quality.

Parker tubes are designed for the special requirements in several markets. Continuous tests in laboratories and on test benches ensure the high quality level of the material. Certifications from independent institutes such as ABS, LR or DNV confirm the adherence to high standards. This opens into reliability and longevity of the hydraulic application.

### Worldwide connections.

The Parker Hannifin tube-warehouse with its worldwide network provides a close and prompt supply of high precision tubes; thus, international customers can also rely on us. Efficient, reliable, environmentally friendly and on-time deliveries are available in almost every country in the world.

### All around tubes.

This brochure provides all relevant information regarding hydraulic lines in a structured and clear way. Which parameters are important, what kind of tubes and dimensions fit the construction and specifications, and which materials are in use in special applications. With Parker order codes you can start right away...

### Certificates

On request our tubes & pipes have the relevant certificates for your markets. The suppliers are approved e.g. by ISO 9001, ISO/TS 16949, ISO 14001. Please ask for details.

# Complete Piping Solutions and System Supplier

## Added Value maximizes your performance

### CPS - Complete Piping Solutions.

Just tubes! But it gets even better. Many customers like to have the complete Parker programme, and that's what we deliver worldwide based on our „Complete Piping Solutions“-concept. Technical support, reengineering, pre-fabrication, delivery and installation. These five steps give an effective and environmentally friendly solution from one source.

Our integrated knowledge, quality products, contemporary production methods and installation-experience guarantee perfect complete solutions for hydraulic systems. Integration in existing systems is also available. We help our customers right from their project start to highest productivity and timeliness.

### Advantages as a system supplier.

Parker Hannifin is the world's leading diversified manufacturer of motion and control technology. The company offers a product portfolio that is exemplary in the breadth and depth, and in constantly keeping quality. Through an international distribution network, the components are delivered quickly.

System solutions are tailored to the customer's situation. Whether DIN or SAE and available anywhere in the world. It will match everything together with a system, and the global design production is nothing in the way to the last detail. Efficient, sustainable and progressive.

ENGINEERING YOUR SUCCESS.

### Tube and pipe specification

#### Recommended carbon steel tubes and pipes

Parker recommends the use of cold drawn seamless hydraulic tubes and pipes acc. to DIN EN 10305-4.

E 355N (St. 52.4 NBK) or E 235N (St. 37.4 NBK).

+ precision dimension/shape + clean inside (no scale)  
 + high pressure capability + excellent scaling surface after roll flaring

#### Recommended stainless steel tubes and pipes

Parker recommends the use of seamless cold drawn stainless steel tubes and pipes acc. to

DIN EN 10216-5

ASTM A269/A213

ASTM A312

+ precision dimension/shape + excellent scaling surface after roll flaring  
 + high pressure capability

#### Welded tubes and pipes

Tubes and pipes acc. to above specification but welded and cold redrawn instead of seamless drawn are usually suitable. Pressure capability might be reduced due to the welding seam zone.

Welding seam quality might effect roll flaring surface results.

#### Hot rolled pipes

Hot rolled pipes are not recommended for the following reasons:

Hot rolled pipes do not have precision dimensions and may slip in machine dies.

They have scales inside and outside. The inside scales effect the cleanliness level of the fluid and reduces fatigue levels.

Used in roll flaring process the scales will contaminate the flaring tools (high cleaning effort) and cause poor flare surface quality.

**The required maximum working pressure is calculated either acc. to DNV, DIN or ANSI.**

### Material Specifications & Values

#### 1.0308 (E235/St.35.4) acc. to DIN EN 10305-4

Tensile strength	min 340 N/mm <sup>2</sup>
Yield strength	min 235 N/mm <sup>2</sup>
Fatigue strength	225 N/mm <sup>2</sup> <sup>1)</sup>
Elongation at break	min. 25%

#### 1.0508 (E355/St.52.4) acc. to DIN EN 10305-4

Tensile strength	min 490 N/mm <sup>2</sup>
Yield strength	min 355 N/mm <sup>2</sup>
Fatigue strength	265 N/mm <sup>2</sup>
Elongation at break	min. 22 %

#### 1.4571 (316 Ti) cold drawn (CFA)<sup>3)</sup> acc. to DIN EN 10216-5

Tensile strength	min 500 N/mm <sup>2</sup>
0.2 % proof stress	min 210 N/mm <sup>2</sup>
1 % proof stress	min 245 N/mm <sup>2</sup>
Fatigue strength	220 N/mm <sup>2</sup>
Elongation at break	min. 35 %

#### 1.4404 (316L) cold drawn (CFA)<sup>3)</sup> acc. to DIN EN 10216-5

Tensile strength	min 500 N/mm <sup>2</sup>
0.2 % proof stress	min 210 N/mm <sup>2</sup>
1 % proof stress	min 245 N/mm <sup>2</sup>
Elongation at break	min. 35 %

#### 1.4401 (316) acc. to DIN EN 10216-5

Tensile strength	min 510 N/mm <sup>2</sup>
0.2 % proof stress	min 205 N/mm <sup>2</sup>
1 % proof stress	min 240 N/mm <sup>2</sup>
Elongation at break	min. 40 %

#### 1.4301 (304) acc. to DIN EN 10216-5

Tensile strength	min 500 N/mm <sup>2</sup>
0.2 % proof stress	min 195 N/mm <sup>2</sup>
1 % proof stress	min 230 N/mm <sup>2</sup>
Fatigue strength	195 N/mm <sup>2</sup> <sup>2)</sup>
Elongation at break	min. 40 %

#### 1.4404 (316L) ASTM A269 / A213

Tensile strength	min 530 N/mm <sup>2</sup>
Yield strength	min 276 N/mm <sup>2</sup>
0.2 % proof stress / 1.6 <sup>4)</sup>	172.5 N/mm <sup>2</sup>

#### 1.4404 (316L) ASTM A312 / A530

Tensile strength	min 515 N/mm <sup>2</sup>
Yield strength	min 234 N/mm <sup>2</sup>
0.2 % proof stress / 1.6 <sup>4)</sup>	146 N/mm <sup>2</sup>

<sup>1)</sup> DIN 2413 Template, Tab. 4

<sup>2)</sup> Rollof/Matek ME Ausg. 14, (no standard value)

<sup>3)</sup> Strength increase due to cold forming following 1.4571

<sup>4)</sup> Pressure rating calculation based on this mechanical properties require certification according to 3.1 - EN 10204 that confirms the mechanical properties.

## Tube calculation for marine and offshore acc. to DNV rules

Calculation of working pressure of steel and stainless steel tubes for ship building acc. to DNV Part 4, Chapter 6, Section 6.

$$P = \frac{20 \cdot \sigma_t \cdot e \cdot t_0}{D - t_0}$$

P = permissible working pressure [bar]  
 $\sigma_t$  = permissible stress [N/mm<sup>2</sup>]  
 calculated from the lower value off:

stainless steel:	carbon steel:
$\sigma_t = \frac{R_m}{2.7}$ or $\frac{K}{1.6}$	$\sigma_t = \frac{R_m}{2.7}$ or $\frac{K}{1.8}$

$t_0$  = tube wall thickness without allowances [mm]

$$t_0 = t_n \cdot a - c - b$$

$t_n$  = tube wall thickness nominal [mm]  
 a = factor for wall thickness allowance [mm]  
 = 0.8 for Tube-OD 4-5, 0.85 for Tube-OD 6-8, 0.9 for Tube OD  $\geq 10$   
 = 0.9 for all stainless steel tubes  
 b = bending allowance

$$b = 0.1333 \cdot t_0 \text{ (at } R/D=3) \rightarrow t_0 = \frac{t_n \cdot a - c}{1.1333}$$

c = corrosion tolerance, c = 0.3 mm for hydraulic steel tube, c = 0 mm for SS tubes  
 e = strength ratio: for seamless tubes e = 1  
 D = tube outside diameter [mm]  
 $R_m$  = min. tensile strength [N/mm<sup>2</sup>]  
 $K$  = min. yield strength or min 0.2% proof stress [N/mm<sup>2</sup>]

## Tube calculation for landbased and industrial applications acc. to DIN rules

### DIN 2413 I, only for static load

Calculation of working pressure of steel tubes for static stress up to 120°C. Corrosion - additional allowances are not considered for the calculation of pressures. Tubes with a diameter of OD/ID > 2 are calculated for static stress in accordance with DIN 2413 III, but with K = yield strength.

$$P = \frac{20 \cdot K \cdot s \cdot c}{S \cdot D}$$

P = permissible working pressure [bar]  
 K = yield strength [N/mm<sup>2</sup>]  
 s = tube wall thickness [mm]  
 c = factor for wall thickness allowance  
 = 0.8 for Tube-OD 4-5, 0.85 for Tube-OD 6-8,  
 0.9 for Tube-OD 10  
 = 0.9 for all stainless steel tubes  
 S = Safety factor = 1.5  
 D = tube outside diameter [mm]

### DIN 2413 III, for dynamic load

Calculation of working pressure of steel tubes for dynamic stress up to 120°C. Corrosion - additional allowances are not considered for the calculation of pressures.

$$P = \frac{20 \cdot K \cdot s \cdot c}{S \cdot (D + s \cdot c)}$$

P = permissible working pressure [bar]  
 K = fatigue strength [N/mm<sup>2</sup>]  
 s = tube wall thickness [mm]  
 c = factor for wall thickness allowance  
 = 0.8 for Tube-OD 4-5, 0.85 for Tube-OD 6-8,  
 0.9 for Tube-OD 10-80  
 = 0.9 for all stainless steel tubes  
 S = Safety factor = 1.5  
 D = tube outside diameter [mm]

### Burst Pressure calculation

Calculation acc. to Formula of DIN 2413 but without safety

BP = Burst Pressure  
 $R_m$  = min tensile strength  
 s = tube wall thickness  
 c = factor for wall thickness allowance  
 = 0.8 for Tube-OD 4-5,  
 0.85 for Tube-OD 6-8,  
 0.9 for Tube-OD 10  
 0.9 for all stainless steel tubes  
 D = tube outside diameter [mm]

$$BP = \frac{20 \cdot R_m \cdot s \cdot c}{D}$$

### Pressure reductions and temperatures

Required pressure reductions (depending on the material) with reference to the catalogue pressures for higher temperatures. Both metal fitting material and elastomeric sealing compound have to be selected according to the temperature range of the system.

DNV may require different pressure reduction based on application

Material	Pressure reduction of permissible operating temperatures TB in °C														
	-60	-54	-40	-35	-25	+20	+50	+100	+120	+150	+175	+200	+250	+300	+400
Steel components			10%			0%			11%	19%					
Steel, tubes			10%			0%			19%		27%				
Stainless steel components	0%				5%	15%	23%		29%		33%	37%	42%		
Stainless steel, tubes	0%				5.5%	11.5%	21.5%		29%		34%				
Sealing material NBR (e.g. Perbunan)															
Sealing material FKM															
Sealing material Polyurethan (P5008)															

	Permissible operating temperature
	Ambient temperature of hydraulic and pneumatic applications
	Temperature not permissible

Calculation example:

Temperature = 200°C

Material = Stainless steel

Pressure reduction = 29%

Pressure reduction tubes = 21.5%

PN tube 16x2.5/71. DIN2413 III = 362 bar

Formula:

$$PN_{200^{\circ}\text{C}} = \frac{400 \text{ bar}}{100\%} \times (100\% - 29\%) = 284 \text{ bar}$$

$$PN_{\text{tube } 200^{\circ}\text{C}} = \frac{362 \text{ bar}}{100\%} \times (100\% - 21.5\%) = 284 \text{ bar}$$

### Flow diameter of tube lines

#### Determining tube sizes for hydraulic systems

Proper tube material, type and size for a given application and type of fitting are critical for efficient and trouble-free operation of the fluid system. Selection of proper tubing involves choosing the right tube material, and determining the optimum tube size (O.D. and wall thickness).

Proper sizing of the tube for various parts of a hydraulic system results in an optimum combination of efficient and cost effective performance.

A tube that is too small causes high fluid velocity, which has many detrimental effects. In pressure lines, it causes high friction losses and turbulence, both resulting in high pressure drops and heat generation. High heat accelerates wear in moving parts and rapid aging of seals and hoses, all resulting in reduced component life. High heat generation also means wasted energy, and hence, low efficiency.

Too large tubes increase system cost. Thus, optimum tube sizing is very critical. The following is a simple procedure for sizing tubes.

#### Determine required flow diameter

Use table to determine recommended flow diameter for the required flow rate and type of line.

The table is based on the following recommended flow rates that are common in the shipbuilding and offshore engineering:

Pressure lines	- 3	→ 7.2	$\left[ \frac{\text{m}}{\text{s}} \right]$
Return lines	- 2	→ 4.5	$\left[ \frac{\text{m}}{\text{s}} \right]$
Suction lines	- 1	→ 1.8	$\left[ \frac{\text{m}}{\text{s}} \right]$

Avoid flow rates > 8 m/s!

The resulting forces are high and can destroy the tube lines.

If you desire to use different velocities than the above, use the following formula to determine the required flow diameter.

$$\text{Tube - I.D. [mm]} = 4,61 \times \sqrt{\frac{\text{Flow} \left[ \frac{\text{ltr.}}{\text{min}} \right]}{\text{Velocity} \left[ \frac{\text{m}}{\text{s}} \right]}}$$

#### Determine required wall thickness

Use tube/pressure calculation tables shown in the tube chapter to determine recommended wall thickness for the required working pressure and flow diameter of the line. Therefore choose a working pressure which is equal or higher than the required working pressure.

## Flow characteristics

Hydraulic systems are in most cases only rated with a flow velocity defined on the basis of experience. The pressure losses in lines are not taken into account, or measured later on when testing the system. As the pressure losses increase proportionally greater than the flow resistance, it is important to achieve the best rating of the system, so that they are already taken into account when planning the tube connections. Calculation is not as difficult as it is often thought, and this chapter is intended to provide a guideline. Besides, it provides information on how excessive pressure losses can be avoided, because pressure losses result in losses in performance and excessive heat. Noise occurs and possibly cavitation in suction lines.

### Medium

All indication given with regard to flow restrictions and to flow properties refer exclusively to liquids. For gaseous media, the variable density of the gas must additionally be taken into account.

### Units

$$c = \text{Flow velocity} \left[ \frac{\text{m}}{\text{s}} \right]$$

$$d = \text{Pipe inside diameter [m]}$$

$$L = \text{Pipe length [m]}$$

$$p = \text{Pressure [Pa], } 1 \text{ bar} = 100000 \text{ Pa}$$

$$\dot{V} = \text{Flow rate} \left[ \frac{\text{m}^3}{\text{s}} \right], 1 \frac{\text{m}^3}{\text{s}} = 6000 \frac{\text{l}}{\text{min}}$$

$$\lambda = \text{Pipe friction factor}$$

$$v(T) = \text{Kinematic viscosity of the medium depending on temperature} \left[ \frac{\text{m}^2}{\text{s}} \right]$$

$$\rho(T) = \text{Density of the medium depending on temperature} \left[ \frac{\text{kg}}{\text{m}^3} \right]$$

$$\zeta = \text{Individual pressure loss coefficient}$$

Only base units have been used. This has the advantage that the formula do not contain correction factors and there is no danger of confusion, e.g. that values are used with the wrong unit. In case values are given in other units – the flow rate is e.g. often given in l/min – it is advisable to convert them into the base units before starting calculation.

### Pressure losses in pipe lines

To calculate pressure losses in pipe lines, it must first be determined whether there is a laminar or a turbulent flow. Laminar flow is homogenous and without turbulence. In case of turbulent flow, the losses increase much more quickly.

Flow profile with laminar flow

Flow profile with turbulent flow

The kind of flow is defined by the Reynolds' number. With a Reynolds' number of more than 2320, the flow changes to turbulent. The Reynolds' number is calculated according to the formula:

$$Re = \frac{c \cdot d}{v(T)}$$

The Reynolds' number is a non-dimensional number. The critical fluid velocity at which the flow regime can change, is thus calculated from:

$$c_{cr} = 2320 \cdot \frac{v(T)}{d} \left[ \frac{\text{m}}{\text{s}} \right]$$

With a given flow rate, the fluid velocity can be calculated according to the formula:

$$c = \frac{\dot{V} \cdot 4}{d^2 \cdot \pi} \left[ \frac{\text{m}}{\text{s}} \right]$$

Subsequently, the pipe friction factor  $\lambda$  can be calculated. The pipe friction factor  $\lambda$  is a function of the Reynolds' number and also depends on the roughness of the pipe. As hydraulically smooth pipes can generally be assumed in hydraulic applications, the pipe friction factor  $\lambda$  is calculated according to the following formula:

$$\text{laminar flow, } (Re < 2320): \lambda = \frac{64}{Re}$$

$$\text{turbulent flow, } (Re > 2320): \lambda = \frac{0.3164}{\sqrt[4]{Re}}$$

Finally, if all factors are known, the pressure loss in a certain pipe line can be calculated according to the formula:

$$\Delta p = \lambda \cdot \frac{L}{d} \cdot \frac{\rho(T) \cdot c^2}{2} \text{ [Pa]}$$

### Calculation of individual losses

A hydraulic system does not only incorporate pipes, but also valves, fittings, pipe bends etc. that cause flow losses. These individual losses are often much higher than the pipe losses and are calculated according to the following formula:

$$\Delta p = \zeta \cdot \rho(T) \cdot \frac{c^2}{2} \text{ [Pa]}$$

## Technical Properties, calculation rules and norms

### Oil flow and pressure loss

All calculations based on Tube acc. to EN 10305-4, viscosity 37cst. specific gravity 0.860.  
Following formula used and to determine other required tube or pipe sizes:

$$\text{Tube/Pipe I.D.} = 4.61 \times \sqrt{\frac{\text{flow/min}}{\text{velocity m/s}}}$$

Tube	Oil flow capacity l/min			Pressure loss in tube bar/m		
	1.8 m/s	4.5 m/s	7.2 m/s	1.8 m/s	4.5 m/s	7.2 m/s

Surface finish:

- Phosphated and oiled:
- Tubes with I.D. 1.5–5 mm: outside and inside oiled.
- Tubes from 6 mm I.D.: outside and inside phosphated and oiled.

• Cr(VI)-free:

These dimensions are externally thick coat passivated (thickness of coat 8–12 µm), inside oiled.

# Parker's Motion & Control Technologies

At Parker, we're guided by a relentless drive to help our customers become more productive and achieve higher levels of profitability by engineering the best systems for their requirements. It means looking at customer applications from many angles to find new ways to create value. Whatever the motion and control technology need, Parker has the experience, breadth of product and global reach to consistently deliver. No company knows more about motion and control technology than Parker. For further info call 00800 27 27 5374

## Aerospace

### Key Markets

Aftermarket services  
Commercial transports  
Engines  
General & business aviation  
Helicopters

Chemical & refining  
Food & beverage  
Marine & shipbuilding  
Medical & dental  
Microelectronics  
Nuclear Power  
Offshore oil exploration  
Oil & gas  
Pharmaceuticals  
Power generation  
Pulp & paper  
Steel  
Water/wastewater

### Key Products

Analytical Instruments  
Analytical sample conditioning products & systems  
Chemical injection fittings & valves  
Fluoropolymer chemical delivery fittings, valves & pumps  
High purity gas delivery fittings, valves, regulators & digital flow controllers  
Industrial mass flow meters/ controllers  
Permanent no-weld tube fittings  
Precision industrial regulators & flow controllers  
Process control double block & bleeds  
Process control fittings, valves, regulators & manifold valves

## Sealing & Shielding

### Key Markets

Aerospace  
Chemical processing  
Consumer  
Fluid power  
General industrial  
Information technology  
Life sciences  
Microelectronics  
Military  
Oil & gas  
Power generation  
Renewable energy  
Telecommunications  
Transportation

### Key Products

Dynamic seals  
Elastomeric o-rings  
Electro-medical instrument design & assembly  
EMI shielding  
Extruded & precision-cut, fabricated elastomeric seals  
High temperature metal seals  
Homogeneous & inserted elastomeric shapes  
Medical device fabrication & assembly  
Metal & plastic retained composite seals  
Shielded optical windows  
Silicone tubing & extrusions  
Thermal management  
Vibration dampening

ENGINEERING YOUR SUCCESS.

# Parker Worldwide

## Europe, Middle East, Africa
